PROFILE Front-end and UI/UX developer (React, TypeScript). Designed, built and maintain the front-end of a management system in production, used daily by the Instituto INATOS team, along with the design system that supports it. Accessibility and contrast are verified by script, not by eye.

BY THE NUMBERS	117	13	257/257	36
	screens in React and TypeScript	UI primitives, replacing 55 duplicates	fields with an accessible name	contrast pairs verified by script

EXPERIENCE **INATOS Management System — front-end & UI/UX** Mar 2026 – present

Instituto INATOS — National Institute for Assistance, Work, Opportunities and Health
Rio de Janeiro nonprofit running social-assistance programs for families in vulnerable situations. Internal financial reporting system (15 modules, 5 access roles) that replaced a web of spreadsheets.

- Migrated the system from a Streamlit data prototype to React + TypeScript and took it to production as a product the team uses every day.
- Created the design system from scratch: OKLCH palette derived from the brand colors (also the status vocabulary: paid, pending, disallowed), light/dark themes, typography and spacing tokens.
- Built the UI primitives (button, field, table, dialog, combobox, filter, badge, chart), each with all seven states: default, hover, focus, active, disabled, loading and error.
- Made the interface operable by keyboard and screen reader: accessible names on every field and 80 icon-only buttons, focus trapping in 56 dialogs. Before, keyboard users could not attach a file.
- Wrote a dependency-free contrast validator (sRGB, OKLab, OKLCH and the WCAG 2.1 formula) that runs as a gate on both themes: 4.5:1 for text, 3:1 for indicators.
- Ran an interface audit across every module, with 247 findings traced to their root cause, and cleared the type debt (30 TypeScript errors), now kept as a clean baseline.
- Designed dense screens (financial tables, reconciliations, long forms, dashboards), responsive across 5 breakpoints: cards on mobile, pinned column on tablet, sidebar on desktop.
- Shipped features that run in the browser itself: batch renaming via the File System Access API, PDF OCR with review before writing, spreadsheet export and Word document reading.

SKILLS	Front-end	TypeScript, JavaScript (ES2022), HTML5, CSS3; React 18 (hooks, context, error boundaries), Vite 6, Tailwind CSS v4, Radix UI, Motion/Framer, Recharts; Python, SQL and PowerShell elsewhere in the system.
	UI / UX	Design systems and tokens, OKLCH color, light/dark themes, typography and modular scale, responsive layout, micro-interactions, UX writing in Portuguese, interface audits.
	Accessibility	WCAG 2.1 AA, accessible names, keyboard navigation, focus management in modals, aria and role, prefers-reduced-motion, color never the sole carrier of meaning.
	Data & APIs	REST, Fetch/streams, File System Access, localStorage, Intl (pt-BR dates and currency); loading and error states, long tables with filtering and sorting.
	Tools	Git, Figma (Make and handoff), browser DevTools and VS Code.

EDUCATION **Associate Degree in Systems Analysis and Development** 2024 – 2026
UNISUAM, Rio de Janeiro · completed

LANGUAGES	English	Advanced. One-year exchange in New Zealand, living and studying in English.
	Portuguese	Native.
